(54) Title: METHOD AND SYSTEM FOR FORMING AN IMAGE OF AN ORGAN

(57) **Abstract:** The invention relates to a method and system for forming an image of an organ. The solution comprises emitting optical radiation toward an organ via at least one exit aperture (412 to 414) of a camera unit (200) and, via an entrance aperture (406) of the camera unit, forming an image of the organ by means of the optical radiation supplied from the organ, and emitting and receiving the optical radiation via separate entrance aperture (406) and exit apertures (412 to 414) whose optical axes differ from each other.
